

IUE Reminder - "One Liner"

Users are reminded that the current IUE absolute calibration in low dispersion is that of Bohlin and Holm (1980), IUE NASA Newsletter No. 10, p. 37. This calibration replaced the preliminary version (Bohlin, et al. 1980, Astron. and Astrophys., 85, 1) which was derived in 1979 before the SWP ITF error was discovered. The revised calibration was completed in May 1980 and installed in production date processing on November 3, 1980.

R. Bohlin

A. Holm
