NASA Sixth Year IUE Programs

Competition for observing time with the IUE was stiffer than ever during the proposal and peer review cycles for the sixth episode. The review process culminated in the approval of a record number of 207 NASA programs, 187 of which involve observing time and 20 of which will use existing, archival data only.

Table I presents a breakdown, by episode and research area of the first six years of NASA supported IUE science. It also shows the steady year-by-year increase in proposal competition and scientist involvement in approved programs. During the sixth year 287 different scientists will be active as Principal Investigators (PIs) or Co-Investigators (Co-Is) on NASA IUE programs. This year, thirty scientists are IUE program PIs for the first time. (For the fifth episode there were 22 first-time PIs). Just under half of the new episode's first-time PIs have been Co-Is on previous programs. The names of the new PIs and their institutions are given in Table II.

A complete list of sixth episode NASA IUE programs follows the two tables. Following the NASA list is a list of sixth year programs awarded observing time at VIILSPA by the European Allocation Committee which reviewed proposals submitted to ESA and the SERC.

Keith Kalinowski
