It is possible to do standard data reduction procedures via phone lines to the Colorado RDAF. The minimum hardware requirements are a modem (operating at either 300 or 1200 Baud) and a terminal. For graphics display, a Tektronix 4010 or 4025 emulation is necessary. We have successfully used an IBM PC with a Tektronix emulator and a VT100 with Retrogaphics. For non-graphics work (for example, searching the Merged Log) a VT100 or similar terminal is sufficient. For further information contact Edward W. Brugel or Terry Armitage at (303) 492-7310.
