

Notice of Anomalous Image Header Labels
For Early 1984 Low Dispersion Images

Due to computer software problems, the header labels of a group of recent low dispersion IUE images are missing certain entries. Missing are the exponents of the dispersion constants as they would normally appear in the header. The image sequence numbers of the affected images are:

LWP 2728 to 3261

LWR 17239 to 17405

SWP 22181 to 22891

Please note that only the header labels were affected. None of the processed data were affected.
